

UT-4505/X C-Band Up Converter

Converters

Application

The Comtech EF Data (CEFD) UT-4505/X Up Converter is the ultimate in high performance and cost effective C-Band frequency conversion. The UT-4505/X can be used for SCPC, DAMA, and TDMA, as well as full transponder HDTV and analog TV. Spectral purity and stability characteristics fully meet or exceed the requirements of all domestic, international, and regional commercial satellite networks.

High Gain

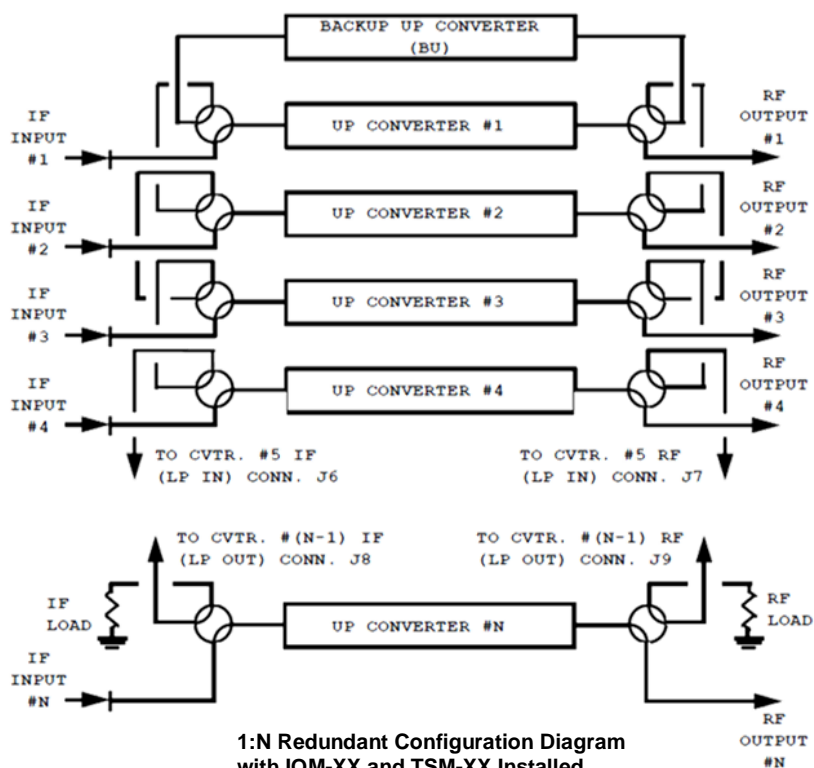

The UT-4505/X has +17 dBm minimum output level at the 1 dB compression point and 35 dB of gain as a standard. These standard capabilities permits longer cable runs to the high power amplifier or compensates for elaborate combining networks without adding expensive options such as external line amplifiers.

Low Phase Noise

The phase noise performance of the UT-4505/X exceeds the Intelsat phase noise mask for IBS and IDR services by more than 9 dB. This allows phase dependent demodulators to perform better. The close-in phase noise is very low, making the converter ideal for low bit rate digital circuits such as those used in DAMA hub earth stations.

Daisy Chain Redundancy Switching

The converter uses our patented "Daisy Chain" integrated switching technology. The Daisy Chain design removes the relays associated with a centralized protection switch tray and distributes them across the individual converters. Daisy Chain technology successfully eliminates a central switching chassis, two power supplies, a microprocessor, and several long, costly cables. Widely accepted in the industry, CEFD's Daisy Chain provides both pricing and marketing advantages.

Remote Control

The remote control interface is selectable between EIA-232 and EIA-485, as well as full Ethernet including Telnet, SNMP and pre-loaded HTML GUI. All configuration control, status retrieval, and adjustments are available as simple ASCII commands through the serial interface or through the front panel menu. As a cost option, the remote control command structure can be customized in order to accommodate existing network control software.

Detachable RF/IF Connector Module

Each UT-4505/X is equipped with a detachable I/O Module (IOM) that establishes input and output connection types. The module inserts into a rear compartment of the converter, and requires no additional outside space. The IOM includes a Type N connector for the RF path and a BNC connector at 50 or 75 Ω for the IF path.

Minimum Rack Space

Due to its small rack height (1.75 inches) and the elimination of the space penalty paid for a separate 1+N switch chassis, the UT-4505/X and the Daisy Chain switch architecture provide the most compact and cost effective converter subsystem available. The units are ideal for the construction of transportable systems such as "flyaways," and high capacity earth stations where space utilization and economy are prime considerations.

Specifications

Frequency Range	
UT-4505	5845 to 6425 MHz
UT-4505/E	6725 to 7025 MHz
UT-4505/F	6425 to 6725 MHz
UT-4505/G	5925 to 6725 MHz
UT-4505/H	5850 to 6650 MHz
UT-4505/J	7025 to 7075 MHz
UT-4505/K	5725 to 6425 MHz
UT-4505/M	5725 to 6725 MHz
